Approval: Governor DeWine	17
Economy	25
Media consumption	28
Civil liberties and disobedience	33
COVID-19 personal impact	37
Just for fun	48

The Baldwin Wallace University Ohio Poll was conducted between 4/20/20 and 4/25/20 in partnership with Oakland University (Michigan) and Ohio Northern University.

The survey was conducted online among self-identified registered voters in Ohio ($n = 797$) using Qualtrics, an online sample aggregator. Sampled individuals were emailed by Qualtrics and responded using a personalized link to the survey.

The survey included quotas for age, education, and gender for each state. The quota for age was based on the 2016 Voting and Registration Supplement to the Current Population Survey. The quotas for education and gender were based on data from the 2017 American Community Survey. The survey also included quotas for central metro areas and fringe metro areas at the county level based on data from the U.S. Census, as well as the 2013 National Center for Health Statistics' (NCHS) Urban-Rural Classification Scheme for Counties.

The survey results are weighted by gender, education, race/ethnicity, and annual household income to be representative of each state's population. In this survey, the design factor was 1.08. The overall margin of error was $\pm 3.7\%$. The sample size and margin of error are applicable only to overall results, indicated by highlighted columns in the following tables. Columns without highlighting refer either to demographic subgroups or to questions asked only of subgroups of respondents; consequently, such columns necessarily have a higher margin of error. Total column percentages may not add to 100% due to rounding error.

This project was funded by Baldwin Wallace University's Community Research Institute, Oakland University (Michigan), and Ohio Northern University.

	Sample size	Margin of error
Ohio	797	$\pm 3.7\%$

Vote choice in 2020

Q1

If the election were held today, for whom would you vote?

Ohio		Gender		Party ID		
Response	All	M	F	Dem	Rep	Ind
Definitely Donald Trump, the Republican	32.2	35.4	29.3	4.2	70.5	18.8
Probably Donald Trump, the Republican	12.0	13.6	10.6	5.2	15.2	18.0
Probably Joe Biden, the Democrat	13.8	10.0	17.5	21.8	5.2	14.2

Other	11.0	7.8	11.3	12.2	9.1	12.8	8.3		

Methodological notes

Baldwin Wallace University’s Ohio Poll, in partnership with Oakland University (Michigan) and Ohio Northern University, was conducted between 4/20/20 and 4/25/20.

Survey Respondents The survey was conducted online among self-identified registered voters in Ohio ($n = 797$) using Qualtrics, an online sample aggregator. Sampled individuals were emailed by Qualtrics and responded using a personalized link to the survey.

To achieve a representative sample, Qualtrics panel partners randomly select respondents for surveys where respondents are highly likely to qualify. Each sample from the panel base is proportioned to the general population and then randomized before the survey is deployed. Potential respondents receive an email invitation to participate, which informs them that the survey is for research purposes only, how long the survey is expected to take, and what incentives are available. Incentives include cash, airline miles, gift cards, redeemable points, sweepstakes entries, and vouchers. To avoid self-selection bias, the survey invitation does not include specific details about the contents of the survey.

The survey included quotas for age, education, and gender. The quota for age was based on the 2016 Voting and Registration Supplement to the Current Population Survey. The quotas for education and gender were based on data from the 2017 American Community Survey. The survey also included quotas for central metro areas and fringe metro areas at the county level based on data from the U.S. Census, as well as the 2013 National Center for Health Statistics’ (NCHS) Urban-Rural Classification Scheme for Counties. We have included additional information about these quotas below.

Responses in this survey were weighted by gender, race/ethnicity, annual household income, and education to be representative of each state’s population. Weights of individual respondents were capped. The margin of error was computed using an adjustment of the classical Central Limit Theorem margin of error associated to random samples. Specifically, the margin of error (computed at a 95% confidence level) was inflated relative to the ordinary calculation by a factor of $\sqrt{1 + cv(\text{weights})^2}$, where cv denotes the coefficient of variation. In this survey, the design factors was 1.08. The overall margin of error was $\pm 3.7\%$. This margin of error assumes that the weighted estimates are approximately unbiased. This assumption implicitly relies on the assertion that any differences between the survey sample and the target population on key survey outcomes are corrected by demographic raking. No analysis was conducted to validate that assertion.

The sample size and margin of error are applicable only to overall results, indicated by highlighted columns in the preceding tables. Columns without highlighting refer either to demographic subgroups or to questions asked only of subgroups of respondents; consequently, such columns necessarily have a higher margin of error. Total column percentages may not add to 100% due to rounding error.

The survey was funded by Baldwin Wallace University’s Community Research Institute, Oakland University (Michigan), and Ohio Northern University.

Quality Checks To ensure that respondents were real people, we included the following question towards the beginning of the survey: “Please identify the color pictured here.” Respondents who did not select ‘yellow’ were not allowed to continue with the survey.

We also included a question early in the survey to encourage respondents to give truthful answers and pay attention: “We check responses carefully to make sure that people have read the instructions for the task and responded carefully. There will be some very simple questions in what follows that test whether you are reading the instructions. If you get these wrong, we may not be able to use your data. Do you understand?” Response options included yes, no, and unsure. We randomized the order of ‘yes’ and ‘no.’

Third, we screened out people who were speeding through the survey and removed them from the dataset.

Randomized Response Options Throughout the survey, we randomized the order in which responses appeared to minimize response-order bias. For Q3.1 through Q3.9, we randomized the order in which public officials' names appeared. For Q4, we randomized the order in which issues appeared. For Q10 and Q14, we randomized the order of "acted too quickly" and "waited too long to act." For Q12, we randomized the order of "more likely" and "less likely." For Q18, we randomized the order of "President Trump" and "Governor DeWine." For Q31.1 through Q31.6, we randomized the order in which the media outlets appeared. For Q1, we randomized the order of "Donald Trump, the Republican" and "Democratic Party's candidate." The order of questions Q36.1 through Q36.4 was randomized in the survey. For Q37, Q42, and Q44, we randomized the order of "yes" and "no." For Q39.1 through Q39.7, we randomized the order in which hardships appeared." For Q45 through Q48, we randomized the order in which the first two statements appeared." For Q51, we randomized the order of "immediately resume activities" and "limit activities indefinitely." For Q52 and Q53, we randomized the order in which the beverages and snacks appeared.

Additional Information about Quotas for Central Metro Areas and Fringe Metro Areas To ensure that urban respondents were not overrepresented and that rural areas were not underrepresented, we instituted quotas for large central metro areas and large fringe metro areas. To do so, we utilized population data at the county level from the U.S. Census, as well as the 2013 NCHS' Urban-Rural Classification Scheme for Counties.

In Ohio, the NCHS classified Cuyahoga County, Franklin County, and Hamilton County as central metro areas. The Cleveland fringe metro area included Geauga, Lake, Lorain, and Medina counties. The Cincinnati fringe metro area included Brown, Butler, Clermont, and Warren counties. The Columbus fringe metro area included Delaware, Fairfield, Hocking, Licking, Madison, Morrow, Perry, Pickaway, and Union counties.

Survey demography: Ohio

Sample size: $n = 797$ registered voters

Gender	n	% (raw)	% (wtd)
